Lab experience: Module 5 HTML/CSS Matching Game Project

Goal:

The goal of the "HTML and CSS Tutorial for Kids: Thanksgiving Matching Game" from CodeWizardsHQ is to teach the basics of HTML and CSS coding by creating a fun and interactive game. The tutorial is designed to make the goal to make learning to code accessible and enjoyable for them. By following the tutorial, we will gain hands-on experience with HTML and CSS, the foundational technologies for building websites. In addition, the matching game format will help us practice and reinforce their learning and hopefully spark an interest in coding and technology.

Summary/Things learned:

HTML basics: They will learn how to create the structure of a website using HTML elements such as headings, paragraphs, images, and links.

CSS basics: They will learn to use CSS to style their HTML content, including specifying font styles, colors, and background images.

Web design principles: They will learn how to create an aesthetically pleasing and user-friendly game, including how to lay out elements on the page and how to make the game responsive.

Problem-solving: They will learn how to use code to solve problems, including how to create a functioning game with HTML and CSS.

Status: Not good at all. I barely knew what I was doing. I was confused the whole time about why it didn't work
